

Tatonka

Skill 30

Ultra-light hiking rucksack with an innovative carrying system: Systematic material reduction in the X Vent Zero carrying system offers maximum ventilation with a minimum of back contact. Tensioning of the system is infinitely variable. Two openly-secured fibreglass rods in an X shape – which can be removed to allow force-fitting – form the load bearing connection to the pack. The rucksack weighs 925 grams thanks to a reduction of materials and the use of a light fabric.

Barrel EXP

Travel bag with an innovative compression and fixing system: This robust travel bag is made of high quality, durable materials. It can be compressed to reduce its size by way of an aluminium rod system inserted into a hypalon retainer. All the compression and shoulder straps can be repositioned or removed, while the aluminium rods can also be used for fixing gear. Two rubber grips and concealed rucksack shoulder straps offer additional carrying options.

Teva

FUSE-ION

The biggest problem with high-performance shoes is: "I can't wear them to the bar." So Teva designed a shoe that people would gladly wear to the bar before they figured out a way to make it the highest performing water shoe Teva ever built. The Spider Rubber + JStep outsole will stick to a grease-covered aluminum ramp. The ion-mask™ technology actually prevents the materials from absorbing any water on a molecular level. The Drainage channels in the forefoot allow water to escape. A collapsible heel lets you slip in and out easily.

Teva®

CHURN

The Churn is a multi-sport shoe that specializes in getting wet. Its mesh upper is extremely breathable and quick-drying, The Spider Original rubber is made to grip like crazy in wet environments, and a thin nylon shank keeps your foot stable and in control. Mesh materials drain water and dry quickly, drainage channels in the forefoot allow water to escape. A fold down heel with a Shoc Pad gives you convenience and cushioning, the molded EVA foam in the midsole is light and durable.
