

# Vaude

## Grindstone Jacket

The Grindstone Jacket, a technical softshell with plenty of clever features, is the perfect choice to take with you when heading out on your next trekking adventure. Vaude naturally uses environmentally friendly Bluesign certified materials, plus fabrics that are functional and technically sophisticated. WindProof 100 at the front combined with highly breathable stretch inserts under the arms produce a perfect combination for those heading off outdoors.

## Alpine backpack Challenger 35+10

The new flagship in alpine backpacks is a "master of the mountains". This professionally outfitted prodigy with Anatomic Alpin suspension system, front crampon compartment and ice tool garage is truly convincing when it comes to alpine climbing, high elevation tours and ski tours the whole year round as well as being ecologically sustainable. Thanks to intensive research, Vaude is also able to guarantee, with the Bluesign standard, that its mountain backpacks are made with absolutely "clean", resource efficient manufacturing.

THE SPIRIT OF  
MOUNTAIN SPORTS

## Mera Peak Light Pants

The extremely popular Mera Peak Pants, which won the Outdoor Industry Award 2010, are now available in a Light version with Bluesign certified fabrics. These high altitude touring pants, made from high-stretch, fast-drying Schoeller 3xDry fabric, offer limitless freedom of movement and are specifically designed to allow a lightweight Edelrid Loopo Light (110 g) climbing harness to be worn underneath. This provides a great deal more comfort on high altitude tours by enhancing air circulation and allowing full access to pant pockets. Additionally the Edelrid Slide Rail System lets you easily clip on gear loops for karabiners, and ice screws to your pants.

## Approach Shoe Dibona

Dibona shoes were designed for approaches and easy climbing, but they are just as comfortable for trekking tours and everyday use. The specialised Approach Vibram sole features a climbing zone at the forefoot, and a softer rubber blend to guarantee optimal traction. A lacing system that extends farther down the shoe and the Vaude heel collar provide a secure hold in rocky terrain. With their youthful, athletic good looks, these shoes are definitely eye-catching, whether on hot rocks or on your approach to the local ice cream parlor.
